

RESEARCH VOLUNTEERS NEEDED

Men and Women with Elevated Cholesterol Needed!

Investigators from the Preventive Cardiology Department at Hartford Hospital are examining how genetic differences may explain why people respond differently to common cholesterol-lowering medications.

To participate you must be:

- Aged 18 – 65
- Not taking a cholesterol lowering drug

The 4 month study requires:

- Treatment with an FDA-approved cholesterol lowering medication
- Two visits lasting under one hour to Hartford Hospital for:
 1. Blood samples
 2. Questionnaire completion

Participants will receive:

- Information on your health status
- Financial compensation up to \$100 for your time

For more information, please call (860) 545-1507
