

Research Volunteers Wanted!

The Preventive Cardiology Department is conducting a research study to examine vascular function in men previously treated for testicular cancer.

To Volunteer you must be:

- **Previously treated for testicular cancer within the last 10yrs**
- **20-55yrs old**

Study involves non invasive blood vessel function test, carotid IMT scan, and arterial stiffness measurement. Participants who finish the study will receive free health information and financial compensation for their time.

All testing will be performed at Hartford Hospital.

Call Amanda for more information (860) 545-3454.
